MacroTote[™] 9-FV

MacroTotes can be nested within one another, allowing 15% more totes to be delivered to the harvest site with every shipment. As an added benefit, they do not stick together when nested.

MacroTotes are the latest product addition and innovation from Macro Plastics. Since the demand for plastic MacroBins[®] is at an all-time high, we are answering the call for a complementary tote that nests efficiently within our bins. The advanced tote design minimizes product damage, reduces heat absorption in the field, and offers the same great product protection as MacroBins.

The MacroTote 9-FV is 11" x 17" x 8.5" with the net volume of 1028 cu. in., and a weight of 1.9 lbs. It can be packed to improve shipping efficiencies within the MacroBin 28, 32, 33, and 34 models. Three layers of nine MacroTotes can fit securely within the

28 and 33 models, improving the volume contained within each bin by 15% compared to other totes. 16 MacroTotes fit within the MacroBin 32, and 24 MacroTotes within the MacroBin 34.

Feature Highlights

High impact-resistant plastic lasts longer, standing up to heavy day-to-day use, season after season. The molded plastic is durable and resists splintering, reducing damage to your product and injury to workers.

UV-resistant plastic reduces heat absorption in the field extending the shelf-life of your produce.

15% more cooling vents provide better air flow and deliver better product from the field to the store.

Greater shipping efficiencies can be achieved when the totes are packed in the MacroBin 28 or 33 models. 15% more volume per bin can be achieved over other standard industry totes.

Nonporous surfaces won't absorb water or dehydrate your product, thus the MacroTotes maintain a constant tare weight throughout their use.

FDA-approved materials are certified safe for use with food products, eliminating many HACCP problems associated with wood bins.

Rounded corners and smooth surfaces mean fewer scuffs, abrasions, and cuts on your product. Risk of contamination is reduced because there are fewer places for unwanted particles to hide.

Easy-to-sanitize MacroTotes keep cleaning costs to a minimum. A high-pressure wash removes most debris; a nonabrasive brush can dislodge any remaining items.
