# (IPL) MACRO

# Hybrid 1212 FV

HYBRID FAMILY

#### **Features**

Smoother walls with all rounded edges, and less sharp angles; better than any traditional plastic bin

Innovative perimeter geometry keeps walls from bowing out

Smart design keeps base from deflecting and protects contents

Wall taper prevents walls from one bin crashing against the walls of any adjacent bins. We call this the "Bruise Buffer Zone"

Near 10% more ventilation than traditional plastic bins

Durable FDA-approved plastic

New column design absorbs and recoils on impact, instead of resisting impact and breaking

In a stack, the top bin doesn't nest into the bottom bin. Instead, it is secured by lugs, which allows full use of internal volume and keeps the feet and strap of the top bin away from the contents below

## Hybrid 1212 FV

### Benefits of Using Hybrid 1212 FV

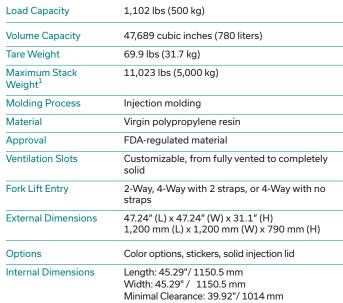

Bins nest in each other for cost efficient delivery anywhere in the world.

Ultra strong bins, can be stacked high with loads.

### Hybrid 1212 FV Specification

Dimensions assume tolerance of ¼". Volume capacities assume tolerance of 5% and tare weights assume a tolerance of 4% unless noted otherwise. Ambient temperature approximately equal to 75° F.

Once column and feet inserts are locked into place, configuration is

permanent to create the strongest, most durable agricultural bin possible

Data is subject to change.

1 Stack Weight = (weight of bin contents + tare weight of bin) X number of bins in stack

Please refer to the appropriate User Guide for information on the safe transportation, stacking and handling of Macro products. The User Guides in PDF format are available, call us at 800.845.6555.
